

# Trippy – AI-Powered Travel Planner

Trippy is an AI-powered travel planning application that helps users plan personalized trips based on their budget, interests, and time. The system intelligently suggests destinations, tourist attractions, activities, and restaurants, while also helping users with bookings for flights, hotels, and local experiences — all in one seamless platform.

## Key Features:

- 1 AI-powered recommendations based on user preferences and budget.
- 2 Budget optimization ensuring maximum value for money.
- 3 Personalized day-by-day itineraries with attractions, food, and activities.
- 4 Smart booking integration for flights, hotels, and events.
- 5 Interactive AI chat assistant for dynamic trip planning.
- 6 Real-time data integration for weather, reviews, and travel conditions.

## Tech Stack:

Frontend: React.js / Next.js, Tailwind CSS

Backend: Node.js, Express.js

Database: MongoDB / PostgreSQL

AI Integration: OpenAI API / Gemini / LangChain

APIs: Amadeus API, Google Places API, Skyscanner API

Deployment: AWS / Render / Vercel

## Benefit to Users:

Trippy saves users time, effort, and money by automating the entire travel planning process. It eliminates the hassle of researching and comparing options manually, offering a tailored AI-curated experience. Users gain efficiency, personalization, and peace of mind while exploring new destinations.

## What Makes Trippy Unique:

Trippy makes travel planning easy and personalized. It uses AI to design trips that match your budget, interests, and schedule — while providing real-time insights and handling bookings automatically. Unlike typical travel apps, Trippy focuses on understanding your preferences, offering flexible suggestions, and helping you enjoy a stress-free, well-planned journey from start to finish.

## Future Scope:

- 1 Voice-based AI travel planning assistant.

- 2 Group trip coordination and collaborative planning.
- 3 AR/VR integration for virtual destination previews.
- 4 Dynamic currency and language support for global users.
